## SaaS-Based Deployment Option for The Claroty Platform

### About CTD.Live

CTD.Live is a SaaS-based deployment option for The Claroty Platform designed for organizations that are ready and able to embrace the cloud as a core component of their industrial cybersecurity program. It enables customers to deploy and run the platform's Enterprise Management Console (EMC) in The Claroty Cloud instead of on physical hardware or virtually.

This option is uniquely suited to support digital transformation and modernization initiatives because it is fast, scalable, and always-up-to-date. It also lowers the total cost of ownership of The Claroty Platform by eliminating certain hardware requirements and automating various maintenance and monitoring activities.

#### Scalability

As deployments expand, all assets and their accompanying data, insights, risks and vulnerabilities are automatically populated within the cloud-based EMC. As CTD.Live's central interface, the EMC enables users to easily access it to view, assess, and manage all sites at any time, from any place.

#### Reduced TCO

CTD.Live helps customers minimize the TCO of The Claroty Platform by eliminating the need to allocate and deploy hardware for the EMC and to dedicate time to monitor it. This reduces the total capital and operational expenditures associated with hardware acquisition, configuration, maintenance, and replacement as the network grows.

### About Claroty

Claroty is the industrial cybersecurity company. Trusted by the world's largest enterprises, Claroty helps customers reveal, protect, and manage their OT, IoT, and IIoT assets. The company's comprehensive platform connects seamlessly with customers' existing infrastructure and programs while providing a full range of industrial cybersecurity controls for visibility, threat detection, risk and vulnerability management, and secure remote access—all with a significantly reduced total cost of ownership. Claroty is backed and adopted by leading industrial automation vendors, with an expansive partner ecosystem and award-winning research team. The company is headquartered in New York City and has a presence in Europe, Asia-Pacific, and Latin America, and deployments on all seven continents.

### Key Features & Capabilities

- CTD.Live enables Continuous Threat Detection (CTD) to scale on-demand as network deployments expand to cover newly added assets and sites
- Users automatically receive access to The Claroty Platform's latest features, fixes, and improvements
- Ability to utilize the EMC to respond to remote session alerts
- Reduces the total cost of ownership (TCO) of deployments by eliminating the EMC's hardware requirements

#### Automated Updates

CTD.Live customers automatically receive immediate access to The Claroty Platform's latest features, fixes, and threat and vulnerability intelligence and detection mechanisms. These updates do not require manual installation and users will not have to wait until the updates are available to on-premises deployments.

#### Capability Extension

Through CTD.Live, users of both Claroty CTD and Secure Remote Access (SRA) are able to use the EMC to receive and respond to alerts that are triggered by remote session activity via SRA.
